

## Span

Replaceable Acoustic Fabric Wall Covering

[www.creatif.org.uk](http://www.creatif.org.uk)

## 02\_ReSound

Span is a stretched fabric wall covering system that offers an alternative to traditional acoustic wall panels, with a range of other benefits.

The system is comprised of an absorbent acoustic core which is held in place by track fixed directly to the surface area – both of which remain out of sight behind your chosen fabric.

The track system used offers design flexibility thanks to its compatibility with almost any fabric, which can easily be replaced. Thanks to joining sections, the track can be made to cover an internal wall of any size even when limited by fabric size. Edge sections ensure a clean finish while allowing for details such as power points and switches.

## 04\_Track

Span's 50mm track system offers many benefits, resulting in greater design flexibility;

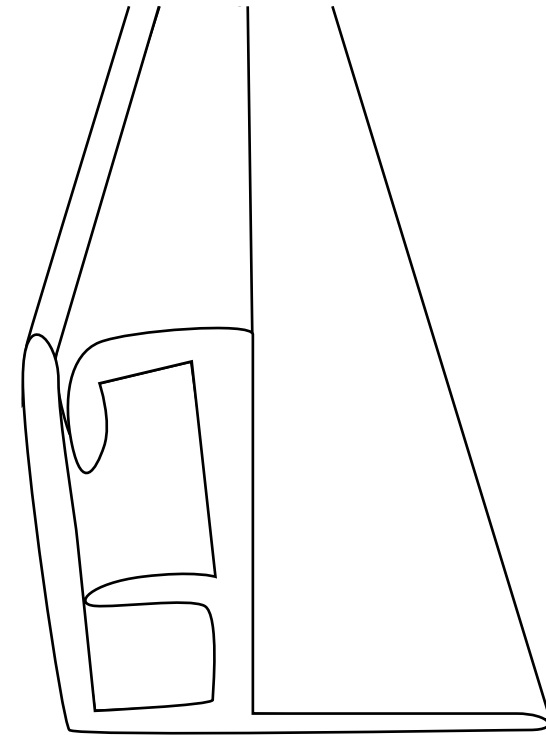

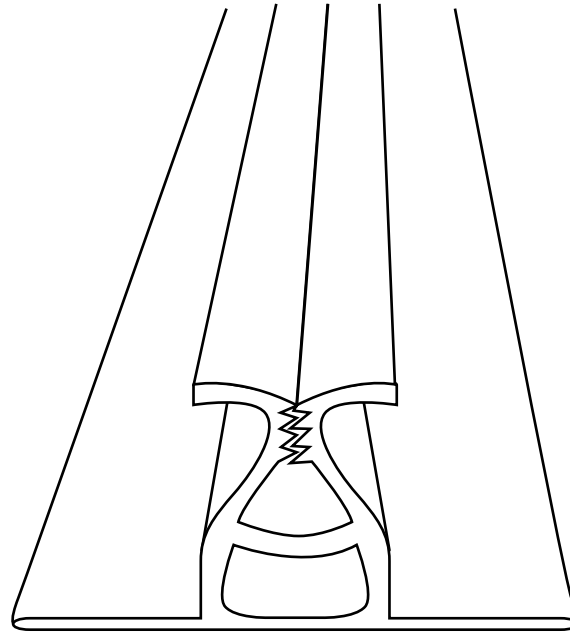

» Almost any fabric can be used

» 'Joining track' can be used to cover larger spaces where joins in the fabric are required

» 'End track' is used to create a seamless finish, with excess fabric trimmed before being tucked into the teeth of the track

» Items such as electrical sockets, switches and vents can all be accounted for, as can smooth corners

» Despite being held firmly in place, fabric can easily be removed, washed and even replaced entirely

## 05\_ Fabric Options

Other colours and finish options are available on request. For further details, please contact: [sales@creatif.org.uk](mailto:sales@creatif.org.uk)

## 10\_Technical Information

### Information

#### Acoustics

The acoustic core used is 24mm thick and provides a Class C level of sound absorption.

#### Fabric

Span is compatible with most fabrics, but please feel free to contact us if you'd like to discuss a bespoke fabric. For fabric-specific information, please refer to the manufacturer.

#### Fire Rating

The acoustic core has been tested and offers Class O fire rating to BS476. Fabric fire ratings can be obtained from the manufacturer.

#### Sustainability

All components can be recycled.
